DETAILED ACTION

1. This action is responsive to communications: Request for Reconsideration filed on 5/13/05.

2. Claims 8 and 9 are cancelled. Claims 1-7 and 10-29 are pending in the case.

Drawings

3. The drawings filed on 12/23/99 are objected to as indicated in the attached PTO-948 form. Formal corrected drawings can be filed at allowance.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treat) defined in section 351 (a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 1, 10, 15, and 20-29 are rejected under 35 U.S.C. 102(a) as being anticipated by Guck (USPN 5,911,776 -filed on 12/1996, herein after "~Guck").

Regarding independent claims 1,10, 15, 20, 21, and 23, Guck discloses:

Art Unit: 2176

Composing a computer message (on col. 2, lines 1-19 teaches an author could originate a text or message of his own personal format), comprising the steps of: (a) presenting a message composition area for entry of an unformatted message (on col. 2, lines 1-19, col. 6, lines 10-28, and col. 12, lines 56-65 teaches an author can create its own message or document in his own format such as Rich Text Format (RTF) (unformatted); the RTF is not a tagging language like TIFF, SGML or HTML) and a. message format selector for selecting an output format from a plurality of formats (on co1.6, lines 49-64 teaches the user sender can change the document by reformatting it in any one of the formats required for the intended recipients); a formatted message display area; converting unformatted message to form a formatted message with format tags of said on of output formats (on col. 5, lines 29-33, col. 6, lines 49-64, and on col. 9, lines 57-65 teaches converting Rich Text format (an untagged format) into TIFF (a tagged format); wherein the document will be formatted in TIFF for display). Presenting message into one text field (col. 12, lines 57-60, wherein the file is a word file. It is inherent that a text field is present) having at least one associated selection field (col. 16. lines 13-23, wherein author creates text file and defines MIME type and selects format. It is inherent that file type is selected (MIME) along with format) and formatted message structured according to output format and selection field (Col 16, lines 15-23, as discussed above. It is inherent that output formatted message is structured in context with selection)

Regarding dependent claims 22 and 24, Guck discloses: displaying said formatted message for user review (on col. 7, lines 6-10: teaches text of a document or message can be displayed for review).

Regarding claims 25-29, they are substantially similar to claims 20-24 and are rejected under same rational.

Application/Control Number: 09/471,429

Art Unit: 2176

Claim Rejections - 35 USC § 103

Page 3

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action
- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 2-7, 11-14, and 16-19 arc rejected under 35 U.S.C. 103(a) as being unpatentable over Guck, as applied to claims 1, 10, 15, and 20-29 above, in view of Ferrel et al. (USPN 6,230,173 B1 -fled on 07/19'95).

Regarding dependent claims 2, 11, and 16, Guck discloses. the invention substantially as claimed as described supra. However, Guck does not explicitly disclose "message formats include SGML and book manager script".

Ferrel on col. 20, line 57 - col. 21, line 26 and col. 2.3, lines 30-33 teaches converting Rich Text (RTF) into a Multimedia Data Format file (MDF); wherein the MDF is the MPML markup language tagged storage; wherein MPML text derived from SGML and HTML.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have modified Ferrel into Guck to provide a way to author documents from Rich Text format (RTF) to be converted into a MDF being a MPML markup language tagged storage, as taught by Ferrel, incorporated into the converting of RTF into TIFF, as taught by Guck, in order to provide the ability to place embedded objects within the structure of the document in an authoring environment.

Application/Control Number: 09/471,429

Art Unit: 2176

Regarding dependent claims 3, 12, and 17, Guck discloses:

a formatted message display area (Duck on col. 5, lines 29-33, col. 6, lines 49-64, and on col. 9, lines 57-65 teaches converting Rich Text format (an untagged format) into TIFF (a tagged format); wherein the document will be formatted in TIFF for display).

Regarding dependent claims 4,13, and 18, Ferrel discloses:

wherein computer instructions for steps (a) and (b) are implemented in Java script (Ferrel on col. 14, line 65 -col. 15, line 3 teaches scripting controls to respond to actions or automatically perform actions at runtime).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have modified Fen-el into Guck to provide a way to author documents from Rich Text format (RTF) to be converted into a MDF being a MPML markup language tagged storage, as taught by Ferrel, incorporated into the converting of RTF into TIFF, as taught by Guck, in order to provide the ability to place embedded objects within the structure of the document in an authoring environment.

Regarding dependent claims 5, 14, and 19, Guck discloses "wherein said unformatted message is a first unformatted message, said formatted message is a first formatted message, said message area further includes a formatted display area" on col. 5, lines 29-32 teaches converting rich text format (RTF) into the TIFF format (tag format).

Ferrel discloses "in response to entry of a second unformatted message into said second message composition area, converting said unformatted message to form a formatted message with format tags of said one of said output formats; and (d) presenting said first and second formatted messages as a concatenated complete message for display in said formatted message display area", on col. 2.

Art Unit: 2176

lines 36-47 teaches creating an displaying stories that are formatted from text document into SGML or HTML to be displayed in an on-line network; wherein producing documents that are tagged in either the SGML and HTML format (first and second message composition area); col. 3, lines 46-65 and on col. 20, line 57 --col. 21, line 26 teaches converting Rich Text format (RTF) to a MDF that holds is tagged language MPML (converting unformatted message into format tags).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have modified Ferrel into Guck to provide a way to author documents from Rich Text format (RTF) to be converted into a MDF being a MPML markup language tagged storage, as taught by Ferret, incorporated into the converting of RTF into TIFF, as taught by Guck, in order to provide the ability to place embedded objects within the structure of the document in an authoring environment.

Regarding dependent claim 6, Guck discloses:

Guck discloses "editing first and second formatted messages and sending a copy of the formatted message to a computer message file" on cot. 6, lines 49-64 teaches author or user sender selects among various formats to reformat his document to send to various recipients and on cot. 12, lines 56-65 teaches creating a file and defining the file in a alternate format. Regarding dependent claim 7, Ferrel discloses:

wherein said first and second composition areas and said formatted message display area are formed in a template that is presented an a web page, and wherein steps (e) and (f) are performed via said web page (Ferret on cot. 3, lines 46-65 teaches using Word template to help author produce documents with valid embedded codes).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to have modified Ferrel into Guck to provide a way to author documents from Rich Text format (RTF) to be converted into a MDF being a MPML markup language tagged storage, as taught by Ferrel,

incorporated into the converting of RTF into TIFF, as taught by Guck, in order to provide the ability to place embedded objects within the structure of the document in an authoring environment.

Response to Arguments

8. Applicant's arguments filed 5/13/05 have been fully considered but they are not persuasive. Applicant argues that Guck fails to teach entering data by user in associated selection field. Applicant further argues that amended claims presents limitation of user entering format and how data is structured in its presentation of format. Examiner disagrees. Specifically the argued limitation is not claimed. The claimed invention presents a selection field along with text field and is silent about user entering structured data. Also Guck teaches definition phase as described in fig 3, wherein user enters format and file type (MIME), which is equivalent to claimed structured entry. Therefore applicant's arguments are not persuasive.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sanjiv D. Shah whose telephone number is (571) 272-4098. The examiner can normally be reached on M-F 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph H. Feild can be reached on (571) 272-4090. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
